

K.LUND Offshore AS

From Kjetil Haugen, QA & HSE Manager at K.LUND Offshore AS:

K.LUND Offshore AS is a locally owned company that manufactures compressors and dryers for the offshore market worldwide. We also have a large fleet of rental lifting equipment consisting of winches, hoists, and cranes. These are also products that we sell. We are located right next to Stavanger airport in Sola, Norway. Today we employ 60 persons in Norway and approximately 30 in our subsidiary in Brazil. And we deliver our products worldwide.

We have used ZIM (Zylin Incident Manager) since 2001, and today we use it both in Brazil and in Norway. We have 64 registered users in the system.

From 2001 until late 2006 we used ZIM as our deviation registration program. Each department manager was responsible of treating deviations registered to his department. We have since the beginning used a reward system to motivate our employees to write deviations. This gave us a lot of registrations and a good statistic base.

In late 2006 we started implementing LEAN/TPM (Total Productive Maintenance) thinking in our organization, and as a part of this we have created 8 improvement groups that meet weekly. All deviations are now being treated by these improvement groups, and they use all deviations as a basis to improve our processes. This has given us more than 4000 improvements since we started this in late 2006

In this process, ZIM has proven to be a valuable tool for us to both register and treat deviations, and also to take the deviations, and create improvements out of them.

We also take out a lot of statistics and reports from the program. This is actually a very good tool for us, as the report generator is very flexible and easy to use.

In the Brazil branch we have used an English translation of the program, and also in Brazil they use it both to register deviations, and to transform the deviations into improvements.

For K.LUND Offshore AS, ZIM is a valuable tool to monitor our deviations and to help us with our continuous improvement works.

QA & HSE Manager
K.Lund Offshore AS

“For K.LUND Offshore, ZIM is a valuable tool to monitor our deviations and to help us with our continuous improvement works.”

Kjetil Haugen

ZIM ONE

ZIM ONE is perfect for single-user installations, and for organizations in the early stages of incident management system deployment. For multiple-user installations, ZIM PRO is required.

ZIM ONE is made for users who need to simply and efficiently register, manage, and document incidents. One important area in smaller companies and organizations is Health, Safety, Environment, and Quality (HSEQ), where a single person may be assigned responsibility for such incidents.

ZIM PRO

ZIM PRO is required when more than one person in the company needs to manage incidents, or when more advanced functionality, like cost tracking or automatic email messaging, is required.

ZIM PRO is the best choice when a company plans to do all the adaptation work internally. ZIM PRO is our basic multi-user incident management tool, and comes without adaptation or customization by Zylin. Zylin also offers adaptation and customization services, and extended support contracts.

ZIM PRO PLUS

ZIM PRO PLUS is a specialized version of multi-user ZIM PRO that has been adapted by Zylin to meet an individual customer's industry-specific and company-specific requirements.

Zylin offers two standard adaptation packages, and individualized custom adaptation services.
